

Water Surface Mystery

Under the surface of the sea
there are innumerable
occurrences of life, ocean currents
and other phenomenons of nature.

III

- When III is rounded describe again
musically the transition between
free air and the surface.

- Then the music flies further freely
over the sea in the open air
ad lib. 2-5 min.

- and the musicians
must on common
agreement describe
the transition
between sea
and surface.

IV

I

Start here

Begin an
underwater journey
by following an ocean
current. Each produced
sound or tone must be somehow
subdued - and movements in the
sound must take place in a way that
reflects that one is under water. After 2-7 min.
the exploration of the marine environment
has come to an end -

- Let yourself be led by an
ocean current and stop
playing in the right
moment on common
agreement.
